Nothing but **HEAVY DUTY.**™

2025

PPE CATALOGUE

STAY **SAFE.**
STAY **PRODUCTIVE.**

SAFETY. TAKEN SERIOUSLY.

By designing cordless tools without compromise, and creating a range of PPE designed around user needs, at MILWAUKEE®, we're making the jobsite safer and more productive every day.

Today, we're proud to boast over 215 Cordless Tools on our M18™ platform and over 95 Cordless Tools on our M12™ platform, eliminating trip hazards from the jobsite. We've redefined the light equipment market with the launch of our MX Fuel™ range, preventing the need for petrol on the jobsite with the launch of key tools including the 350mm Cut Off Saw, and Cordless Breaker.

Personal Protective Equipment has seen little innovation over the years, driving users to modify their gear to better meet their needs. By taking time to understand our users' needs, we have developed PPE from the ground up, enabling users to adapt to each job. This has paved the way for innovative solutions such as our new safety glasses that can be worn all day with lasting, fog-free lenses.

MILWAUKEE® is committed to creating innovative solutions that help users stay safe and stay productive on the jobsite.

HEAD PROTECTION STANDARDS

EN397: EN12492 HEAD PROTECTION

EN397 is a European standard that sets out the requirements for industrial safety helmets. The standard applies to helmets intended to provide protection against falling objects and other types of head impact in industrial settings.

The EN397 standard specifies a number of requirements that a helmet must meet to be considered suitable for industrial use. These requirements include:

1. Resistance to impact: The helmet must be able to withstand a specified level of impact energy without breaking or deforming.
2. Penetration resistance: The helmet must be able to resist the penetration of objects that may strike the head, such as nails, screws or sharp objects.
3. Shock absorption: The helmet must be designed to absorb the force of an impact and distribute it evenly across the head.
4. Retention system: The helmet must have a chin strap or other retention system to keep it securely on the head.
5. Field of vision: The helmet must provide an adequate field of vision for the wearer.
6. Resistance to flame: The helmet must not ignite or continue to burn after exposure to a flame.
7. Electrical insulation: The helmet must provide protection against electric shocks.

EN397 is one of the most widely recognized standards for industrial safety helmets in Europe and is often used as a basis for certification and testing by third-party organizations.

EN12492

EN12492 is a European standard that sets out the requirements for mountaineering helmets. The standard applies to helmets intended to provide protection against impacts, penetration, and lateral deformation for mountaineers, rock climbers, and other vertical activities.

The EN12492 standard specifies a number of requirements that a helmet must meet to be considered suitable for mountaineering use. These requirements include:

1. Resistance to impact: The helmet must be able to withstand a specified level of impact energy without breaking or deforming.
2. Penetration resistance: The helmet must be able to resist the penetration of objects that may strike the head, such as rocks or ice.
3. Retention system: The helmet must have a chin strap or other retention system to keep it securely on the head during an impact.
4. Lateral deformation: The helmet must be designed to prevent excessive lateral deformation during an impact, which can cause injury to the neck or brain.
5. Field of vision: The helmet must provide an adequate field of vision for the wearer.
6. Ventilation: The helmet must have sufficient ventilation to prevent overheating during physical activity.
7. Compatibility with other equipment: The helmet must be compatible with other equipment, such as goggles or headlamps.
8. Durability: The helmet must be designed to withstand normal wear and tear associated with mountaineering activities.

STANDARDS	FORCE TRANSMISSION (TOP)	PENETRATION (TOP)	FORCE TRANSMISSION (SIDE,FRONT, REAR)
EN397	49J 5KG 1M MAX FORCE: 5.000N	29J 3KG 1M	-
EN12492	100J 5KG 2M MAX FORCE: 10.000N	29J 3KG 1M	25J 5KG 0.5M MAX FORCE: 10.000N

To meet the EN12492 standard, a helmet must undergo a series of tests, including an impact test, a penetration test, and a retention system test. The helmet is also tested for lateral deformation, field of vision, and ventilation. EN12492 is one of the most widely recognized standards for mountaineering helmets in Europe and is often used as a basis for certification and testing by third-party organizations.

EN 50365

EN 50365 is the European standard for electrically insulating helmets used for electrical work up to 1,000 volts AC or 1,500 volts DC. It dictates the necessary design, material, and testing requirements to ensure the wearers safety. Compliance with this standard is crucial for protecting individuals working in electrical environments.

MILWAUKEE®'s BOLT 100 hard hat and BOLT 200 helmet fully comply with EN 50365, and is certified for use up to 1000V A.C. and 1500V D.C. in both vented and unvented versions.

DISPOSABLE RESPIRATORS

EN 149:2001+A1:2009 - RESPIRATORY PROTECTIVE DEVICES - HALF MASK

APPLICATIONS	MATERIALS	FFP LEVEL
Cutting, Drilling, Grinding, Sanding	Asbestos	FFP3
	Brick Dust (Can contains Silica)	FFP3
	Cement (Can contains Silica)	FFP3
	Concrete (Can contains Silica)	FFP3
	Glass Dust	FFP3

80%	94%	99%

EN 149 provides requirements, and testing method for respiratory protective devices to protect against particles.

3 classes of protection:
FFP1 / FFP2 / FFP3
FFP = Filtering Facepieces

NR = Not Reusable

D = Dolomite
(protection included when D mentioned)

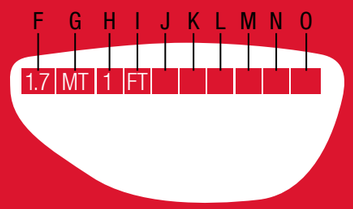

SAFETY GLASSES

EN 166:2001 PERSONAL EYE-PROTECTION

The EN 166 standard specifies requirement for personal eye-protectors, used to combat various hazards as encountered across numerous industries which are likely to damage the eye or impair vision. The EN 170 standard specifies requirements for ultraviolet filters, while EN 172 refers to the sun glare filtration for industrial use.

All MILWAUKEE® safety glasses are certified according to EN 166, to guarantee the eye protection and the resistance to impact. The clear safety glasses are EN 170 certified, to offer an UV protection, even with clear lenses, while the tinted and polarised safety glasses are EN 172 certified to offer a solar protection, ideal for the jobsite and also during leisure time.

- 2C-1.2 MT 1FT CE
- 2 = EN 170 (UV filters standard)
- C = Unimpaired color (clear lenses)
- 1.2 = Protection level (1.2 is the lightest)
- MT = MILWAUKEE® Tool
- 1 = Optical class (avoid diziness)
- F = Impact resistance
  (only F can apply to safety glasses, A & B are for safety goggles)
- T = Extreme temperatures resistance (-5° / +55°)
- K = Anti-scratch
- N = Anti-Fog
- CE = European Certification

Same frame marking for all 6 SKUs

- **MT 166 FT CE**
- MT = MILWAUKEE® Tool
- 166 = Name of the EN standard
- F = Impact resistance
  (only F can apply to safety glasses, A & B are for safety goggles)
- T = Extreme temperatures resistance (-5° / +55°)
- CE = European Certification

HEARING PROTECTION

Hearing protection is crucial on the jobsite to prevent hearing damage from excessive noise exposure. It maintains worker safety, concentration, and productivity. Prioritizing hearing protection safeguards workers' long-term hearing health from permanent damage that may occur and creates a safer work environment.

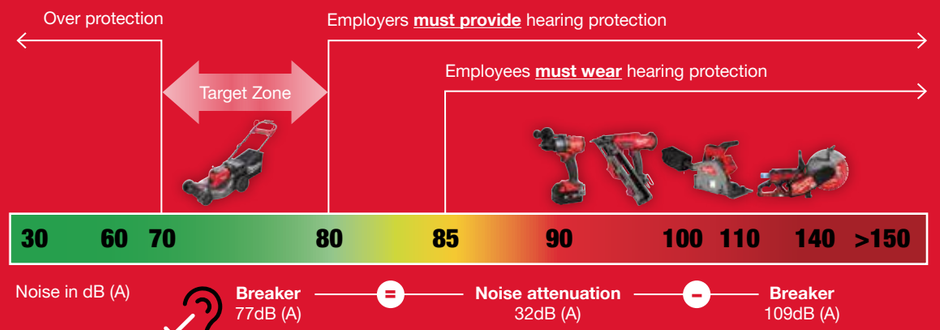

The EN 352 standard that all MILWAUKEE® hearing protection products meet, provides workers with the protection they need to Stay Safe and Stay Productive on the jobsite.

EN 352-2:2020 HEARING PROTECTORS: EARPLUGS

The EN 352-2 standard regulates earplugs that are inserted directly into the ear canal. The standard ensures the earplugs are made with appropriate materials, designed for comfort and effectiveness, meet performance benchmarks, carry necessary markings, and provide clear instructions for users. Adhering to this standard promotes the safety and reliability of earplugs for protecting hearing in noisy environments.

When noise exceeds 85 dB on the jobsite, it is mandatory for employers to provide hearing protection that meets these requirements. All MILWAUKEE® earplugs that are inserted into the ear canal fully meet the EN 352-2 standards and protect workers from long term damage.

Hearing protection is mandatory when noise exceeds 85 dB (upper action level).

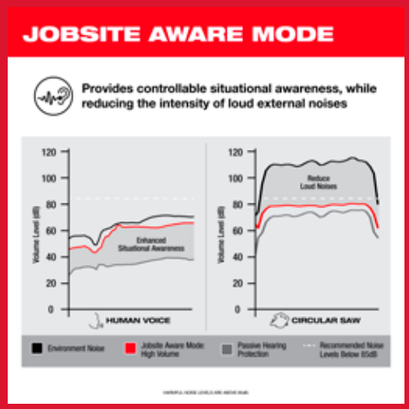

SNR (Single Number Rating) = attenuation in dB
H/M/L = High-/ Medium- /Low-frequency attenuation value

Noise – SNR = residual noise level
Higher SNR or H/M/L value = higher noise attenuation

The REDLITHIUM USB™ Jobsite Earbuds feature advanced technology that not only meets the EN 352-2 standards but also provides additional functionalities for the modern jobsite. Jobsite Awareness Mode ensures that users can safely hear necessary environmental sounds while being protected from harmful noise levels. When fully charged, the earbuds provide up to 10 hours of continuous use, with an additional 70 hour's run time from the case. The earbuds are designed to limit entertainment audio signals to a safe level of 82 dB(A), particularly for Bluetooth A2DP, HFP, and HSP inputs, thereby preventing overexposure to high volume levels that can damage hearing.

To maintain their effectiveness, the foam inserts should be regularly inspected for any signs of wear and tear, such as deterioration or cracking, and cleaned with a damp cloth. It is recommended to replace the inserts periodically to ensure optimal performance and hygiene.

EN 352-2:2020 HEARING PROTECTORS: EAR MUFFS

EN 352-3 is a standard for earmuffs designed to be mounted on protective helmets or head/face protection devices. The standard ensures compatibility, effectiveness, and safety by specifying materials, secure fit, noise reduction, compliance markings, and user instructions. Adhering to EN 352-3 guarantees reliable hearing and head/face protection in hazardous environments.

All MILWAUKEE® ear muffs that are attached to protective hard hats/helmets fully meet the EN 352-3 standards.

HAND PROTECTION

EN 388:2016 PROTECTIVE GLOVES AGAINST MECHANICAL RISKS

The EN 388 standard specifies requirements, test methods, marking and information to be supplied for protective gloves against the mechanical risks of abrasion, blade cut, tear, puncture and, if applicable, impact.

The impact protection has to fully encompass the back of hand, including the fingers. This standard is intended to be used in conjunction with EN ISO 21420.

All MILWAUKEE® hand protection solutions are certified according to both EN ISO 21420 and EN 388 standards, the rating given varies for each type of gloves. EN ISO 21420 is the European general requirement and test method standard for protective gloves.

	Rating
Abrasion	1-4
Cut (Coup Test)	1-5
Tear	1-4
Puncture	1-4
Cut (TDM-100 Test)	A-F
Impact Protection	P,F

4 3 4 3 C X

X= Not tested P= Pass F= Fail

WINTER GLOVES

EN 511:2006 PROTECTIVE GLOVES AGAINST COLD

The EN 511 standard specifies the requirements and test methods for protective gloves against convective cold or contact cold down to - 50 ° C solid.

The cold can vary with the climatic conditions or one professional activity. This standard is intended to be used in conjunction with EN 388 and EN ISO 21420.

	Min – Max
Convective Cold	0-4
Contact Cold	0-4
Water Permeability	0-1

0 1 X

X= Not tested

CHEMICAL GLOVES

EN ISO 374-1: 2016 PROTECTIVE GLOVES AGAINST DANGEROUS CHEMICALS AND MICRO-ORGANISMS

The EN ISO 374-1:2016 standard specifies the requirements for gloves designed to protect against dangerous chemicals and micro-organisms. This includes protection through resistance to degradation, permeation, and penetration by chemicals. Gloves must meet key performance criteria, such as resistance to chemical exposure and maintaining material integrity.

Chemicals can penetrate through defects in the glove material, such as holes. Degradation occurs when the glove material is negatively impacted by chemical contact, and the degradation percentage must be included in the user instructions. Permeation refers to chemicals breaking through the glove material at a molecular level, and gloves are tested to ensure they meet minimum breakthrough times.

Type A gloves must withstand a breakthrough time of at least 30 minutes against 6 or more test chemicals. Type B gloves must meet the same time requirement for at least 3 test chemicals, and Type C gloves must withstand 10 minutes for at least 1 test chemical.

HIGH VISIBILITY

EN ISO 20471:2013 HIGH VISIBILITY CLOTHING

The EN ISO 20471 standard specifies requirements for high visibility clothing to ensure it is capable of visually signalling the user's presence. High visibility clothing ensures the user can be seen in all light conditions and is divided into 3 performance classes depending on the requirements.

The MILWAUKEE® high visibility vests are intended for multiple applications and are class 2 certified.

	Class 1	Class 2	Class 3
Reflective Tape	0.10 sqm	0.13 sqm	0.20 sqm
Fluorescent Material	0.14 sqm	0.50 sqm	0.80 sqm
Level of visibility	Lowest	Intermediate	Highest

RIS-3279-TOM (ONLY ORANGE CONTRACTOR HI-VIS VEST)

RIS-3279-TOM (formerly GO-RT 3279) is a high visibility standard specifically for the UK rail industry, unlike the broader EU-wide EN standards. Its purpose is to ensure rail workers near tracks are highly visible to approaching trains or other traffic. The standard requires compliance with color specifications in BS EN 20471 clause 5.1.2 to ensure a specific orange shade, avoiding red hues. The exact chromaticity coordinates for the fluorescent orange color are X: 0.588, Y: 0.371, with a luminance factor of at least 0.4. While the color tolerance follows EN 20471, there is no tolerance for the luminance factor.

	Class 1	Class 2	Class 3
Reflective Tape	0.10 sqm	0.13 sqm	0.20 sqm
Fluorescent Material	0.14 sqm	0.50 sqm	0.80 sqm
Level of visibility	Lowest	Intermediate	Highest

CLOTHING

EN 13758-1:2001 TEXTILES - SOLAR UV PROTECTIVE PROPERTIES - PART 1: METHOD OF TEST FOR CLOTHING FABRICS

The EN 13758-1 standard specifies the requirements and test methods for clothing designed to offer ultraviolet (UV) protection. This standard ensures that the clothing fabric meets the criteria for UV protection and is capable of effectively blocking harmful UV rays, with a rating of UPF50+ (all MILWAUKEE® EN 13758-1 certified products carry a UPF50+ rating) . This standard is intended to be used in conjunction with other relevant textile and clothing standards to ensure comprehensive protection and performance.

MILWAUKEE® products that hold the EN 13758 certification are: PVA Cooling Towel and Cooling Microfiber Towel, Skull Cap, Work T-Shirts, Warm Weather T-Shirts, Baseball Caps, Performance Caps, Red Performance Neck Gaiters.

KNEE PADS

Wearing knee protection on the jobsite is important for several reasons:

- Reduce the risk of knee injuries: Knee pads reduce the risk of knee injuries that occur from kneeling and crawling.
  This can help prevent long-term damage to the knees, such as joint pain, arthritis, and other knee-related conditions.
- Increase comfort and productivity: Knee protection helps to reduce the discomfort and fatigue that can occur
  from working on hard surfaces or kneeling for long periods.
- Meet safety regulations: In many industries and job sites, knee protection is required by law or industry standards to ensure worker safety. Wearing knee protection can help ensure compliance with these regulations and prevent penalties for non-compliance.

EN 14404:2004+A1:2010 KNEE PROTECTORS FOR WORK WHEN KNEELING

In Europe, the most commonly recognized knee protection standard for workers on job sites is EN 14404:2004+A1:2010. This standard specifies the requirements and test methods for knee protectors used in tasks where the user is frequently kneeling. The standard covers the design, construction, performance, and marking of knee protectors, and it is applicable to all types of knee protectors used in occupational environments, including those worn over or integrated into clothing. Knee pads are tested based on their impact absorption, pressure distribution of the entire surface and protection against penetration of sharp or pointy objects.

EN 14404:2004+A1:2010 is recognized throughout the European Union and is widely used by manufacturers, employers, and workers to ensure that knee protectors provide the necessary level of protection and performance for workers who kneel frequently as part of their job duties.

Type 1	Knee pads independent of other clothing, fastened around the legs
Type 2	Knee pads in foam or other padding, secured in pockets on the legs, or which is permanently attached to the pants.
Type 3	Knee pads not stuck to the body but placed in position as the user moves around.
Type 4	Knee pads, which is part of a unit with additional functions, such as the framework for support to stand up, or kneeling seat. Can be worn on the body, or be independent.

Protection Class 0	Flat floor surfaces
Protection Class 1	Flat or uneven floor surface. Protects against penetration by a force of at least (100 ± 5) N
Protection Class 2	Flat or uneven floor surfaces under severe conditions. Protects against penetration by a force of at least (250 ± 10) N

SAFETY FOOTWEAR

EN ISO 20345:2022 SAFETY FOOTWEAR

The EN ISO 20345:2022 standard outlines the requirements for safety footwear designed for general use. This includes protection against mechanical risks, slip resistance, thermal hazards, and ergonomic performance. Safety footwear must meet all fundamental criteria, such as measurements, construction quality, material durability, and resistance to external factors.

Depending on the specific hazards in the workplace, additional requirements may be necessary. In these cases, the footwear must meet the relevant additional standards and be appropriately marked. Each MILWAUKEE® shoe's specific performance ratings are indicated on the tongue label and the shoe box sticker.

Class I	Footwear made entirely from leather and other materials
Class II	All entirely moulded footwear
SBH	Hybrid footwear that cannot be classed as either I or II.
SB	Safety toe cap protection only, tested with 200 J impact and 15 KN compression force.
S1	Class 1 + Closed heel area + SB + A + E
S2	As S1 + WPA
S3	(Metal insert type P) as S2 + P + Cleated Outsole
S3L	(Non-metal insert type PL) as S2 + PL + Cleated Outsole
S3S	(Non-metal insert type PS) as S2 + PS + Cleated Outsole
S4	Upper material of all Rubber or Polymeric as SB + Closed heel area + A + E
S5	(Metal insert type P) as S4 + P + Cleated Outsole
S5L	(Non-metal insert type PL) as S4 + PL + Cleated Outsole
S5S	(Non-metal insert type PS) as S4 + PS + Cleated Outsole
S6	As S2 + WR
S7	(Metal insert type P) as S3 + WR
S7L	(Non-metal insert type PL) as S3 + WR
S7S	(Non-metal insert type PS) as S3 + WR
HRO	Heat resistant outsole compound: Shall withstand 300°C for 60 seconds.
FO	Resistance to fuel oil
LG	Ladder grip
SC	Scuff cap abrasion

P	(Metal insert type P) Penetration resistant outsole: Lowest penetration value required shall not be less than 1100N
PL	(Non-metallic insert type PL) Penetration resistant outsole: Average penetration force shall not be lower than 1100 N and no single value must be lower than 950 N
PS	(Non-metal insert type PS) Penetration resistant outsole: Average penetration value shall not be less than 1100N
A	Anti-static: Electrical resistance between foot and ground of between 0.1 and 1000 Mega Ohms*
C	Partially conductive footwear. The electrical resistance shall not be greater than 0.1 Mega Ohms between foot and ground*
CI	Insulation against cold: 30 minutes at -17°C, the decrease shall not be more than 10°C
HI	Insulation against heat: 30 minutes at 150°C, the rise shall not be higher than 22°C
E	Energy absorption of the seat region: Energy absorbed to be not less than 20J
WPA	Water penetration and absorption (water resistant and breathable)
AN	Ankle protection: 10N impact means transferred force shall not exceed 10KN and no single value shall exceed 15KN
WR	Water resistant footwear (waterproof membrane)
CR	Cut resistant upper: Cut resistance to exceed 2.5 on the index
M	Metatarsal protection 100J impact energy
SR	SR slip resistance test features glycerine on ceramic tile surface. Replaces SRA SRB SRC.
Ø	No test given – for footwear featuring spikes or studs on sole.

ADAPT TO YOUR JOBSITE

Cut C Sleeves

- High stretch nylon material with 4-way stretch points to fit users' arms.
- Tapered design, wider on the bicep and tight on the wrist, to fit the natural arm form.
- Elastic band with non-slip dots on the bicep and stretch wrist cuff to keep the sleeves in place and prevent them from sagging.
- Breathable and lightweight material provides good dexterity and all-day comfort.
- Elastic thumb loop avoids pressure points when using gloves.
- Sun UV rays protection with UPF 50+ according to BS EN 13758-1:2002 +A1:2006 for the covered part of the arms.
- European Certified for cut protection: EN ISO 21420, EN388:2016 (2342C), UKCA.

Please make sure that the total weight of the tethered product (+ Battery) does not exceed the weight capacity of the tool lanyard!

TOOL LANYARD ACCESSORIES

STAY SAFE. SECURE ANY TOOL.

EASILY CONNECT

- Creates a secure attachment point
- Different connection system (self-adhering tape or rings)

HIGH VERSATILITY

- Possibility to connect tools with or without lanyard holes
- Allows fast tool swap

Locking tool lanyards

- Superior shock absorption - gradually stop the tool if dropped.
- Double locking carabiner - ensures a secure connection that cannot become loose or slip off accidently.
- Integrated swivel - prevents twists and tangles allowing increased mobility.
- Colour coded weight rating - easy identification of lanyard weight capacity.
- High versatility - lanyard accessories can be added to connect all tools to the lanyards.

MACHINE WASHABLE

UP TO 8 HOURS* OF CONTINUOUS HEAT

TOUCH SENSITIVE CONTROLS

MILWAUKEE HEATED GEAR RANGE

Powered by M12™ REDLITHIUM™ or REDLITHIUM™ USB battery technology, MILWAUKEE® Heated Work Gear distributes heat across core body areas. Durable carbon fibre heating elements maintain heat to reduce the need for bulky layers, while multiple heat settings allow the user to select the right amount of warmth for all weather conditions. Our range of heated work wear is fully machine washable and dryable for extended use.

*on a single battery charge (3.0 Ah) at low setting

EXPLORE OUR RANGE OF HEATED GEAR

M12™ heated jacket

- Heat on demand - sewn in carbon fibre heating wires, distribute heat to core body areas and to the front pockets
- Superior run time, up to 8 hours of heat on low level with a single battery charge of an M12™ REDLITHIUM™ 3.0 Ah battery pack
- Easy touch heat controller - 3 heat settings: High, Medium, Low
- TOUGHSHELL™ stretch 90% polyester and 10% spandex material to withstand harsh working conditions and deliver up to 5x longer life
- FREE FLEX™ mobility - additional material under the arms increases range of movement for working overhead
- New battery pocket design providing users multiple options for battery placement, allowing adaptability to the situation
- Improved slim fit design with extended back prevents heat loss and keeps the user warm
- M12™ battery controller with 1 A USB port, to charge mobile devices stored in concealed battery pocket
- Water and wind resistant, provides comfort and durability in harsh environments
- Big hand & chest pocket, ideal for storing mobile devices
- Flexible battery system: works with all MILWAUKEE® M12™ batteries
- Available in sizes S-XXXL
- Machine washable and dryable
